BAD DESIGN (Fairride)
Design Style

- Cluttered layout with inconsistent spacing.
- Icons and text feel mismatched, lacking visual hierarchy.
- Navigation bar is overloaded with too many icons, making it confusing.

Content

- Labels are vague ("Send anything Parcel", "Spacious and Comfortable Scooty").
- No clear prioritization of services; everything competes for attention.
- Search bar is generic ("Search") without context.

Purpose

- Tries to show multiple services at once but ends up overwhelming the user.
- Focus is unclear — user doesn't know what the app's main function is.
- Poor readability and weak guidance for first-time users.

GOOD DESIGN (Fairride)
Design Style

- Clean, minimal layout with balanced spacing.
- Consistent iconography and typography.
- Navigation bar is simplified with clear categories.

Content

- Labels are concise and meaningful ("Where are you going?", "Metro Tickets").
- Services grouped under a clear section ("Everything in minutes").
- Favourites (heart icons) add personalization and usability.

Purpose

- Guides the user toward the main action (booking a ride or parcel).
- Prioritizes clarity and quick decision-making.
- Creates a friendly, approachable interface that feels modern.

Key Differences:

1. **Clarity vs Confusion**

- Good design uses clear labels and hierarchy; bad design overwhelms with vague text and clutter.

2. **Consistency vs Inconsistency**

- Good design maintains consistent icons and navigation; bad design mixes styles and overloads the bottom bar.

3. User-Centered vs App-Centered

- Good design focuses on user needs (“Where are you going?”); bad design focuses on listing services without context.
